Protectaid Sponge

Talk to your partner about birth control before you have sex. You can use latex condoms to lower your chances of getting sexually transmitted infections (STIs) and prevent an unwanted pregnancy.

What is Protectaid Sponge?

The Protectaid sponge is a form of birth control, you can use it to help prevent yourself from getting pregnant. You put it into your vagina before you have vaginal sex. The sponge is a soft, round piece of foam. It has foam handles around it so that you can pull it out. The sponge works as a barrier, covering the cervix, which is the opening to the uterus. The sponge holds three different spermicides, which kill sperm. When sperm is killed, your chances of getting pregnant are lower.

How does Protectaid Sponge work?

The sponge works in four ways:

- ★ It holds spermicide close to the cervix.
- ★ The spermicide kills sperm.
- ★ It works like a sponge. It absorbs and traps sperm.
- ★ It blocks the entrance to the cervix so that sperm cannot enter the uterus

How effective is Protectaid Sponge?

Out of 100 women who use the sponge, 75-90 women will not get pregnant. Your chances of getting pregnant are lower when you use the sponge correctly. You have to use it every time you have vaginal sex. You are less likely to get pregnant when you use the sponge with a condom or another method of birth control.

How do you use Protectaid Sponge?

- ★ Read the instructions that come with Protectaid Sponge.
- ★ Put Protectaid Sponge in place before vaginal sex.
- ★ You can put it in up to 6 hours before you have vaginal sex.
- ★ If you have sex again, leave the sponge in. You can have sex as many times as you want within 12 hours without changing the sponge.
- ★ Leave the sponge in for 6-8 hours after you last had sex. This is so the spermicide can kill the sperm.
- ★ Do not use the sponge when you have your period.
- ★ Once the sponge is used, it needs to be thrown out

It is important to use condoms or a latex barrier with sexual partners to decrease the risk of getting a sexually transmitted infection.

What are the advantages and disadvantages of Protectaid Sponge?

Advantages

- * You don't need to see a clinician to get it.
- * You only use it when you need it.
- * You don't feel it. Your partner doesn't feel it.
- * You don't have to interrupt sex to put it in.
- * Your partner doesn't have to be involved.
- * It is a reversible form of birth control and doesn't cause any changes to your body.
- * You can easily carry it with you.

Disadvantages

- * Spermicide contains nonoxynol-9. With frequent use, nonoxynol-9 can irritate the vagina and anus which increases the risk of getting a sexually transmitted infection, including HIV.
- * It can be expensive if you use it a lot.
- * Some women find it hard to put in or take out.
- * You cannot use it if you or your partner(s) are allergic to spermicides.
- * You can't use it during your period.
- * You need to feel comfortable with your body.
- * If you have a pap test that is not normal, you may not be able to use it.
- * You may have an increased risk of getting Toxic Shock Syndrome; you should return to the clinic in the presence of high fever, diarrhea, vomiting and muscle aches.
- * It does not protect you from STIs.

Where can you get Protectaid Sponge?

You can buy the Protectaid sponge at the drug store or birth control clinic. You don't need to see a clinician to get one.
